

NOVATOP BRIQUETTES

DATA SHEET

Description: These cylindrical briquettes are the only ones in the Czech Republic that contain 100% pure dry spruce sawdust – without bark or binders.

Advantages

- Long burning and smouldering – full briquettes burn longer than conventional alternatives
- Maximum performance – high calorific capacity of up to 18,000 kJ/kg ensures stable heat for a long time
- Eco-friendly choice – pure spruce sawdust without additives with a minimum ash content of only 0.28%
- Premium quality – extremely compacted with a full cross-section for uniform and efficient combustion

The briquettes do not expand during combustion because they are extruded under high pressure and temperature on BIOMAC lines. Thanks to their minimal ash content, they are particularly suitable for fireplaces and tile stoves, which are sensitive to ash quantity. They are ideal for all-day heating and maintaining a stable room temperature – full briquettes burn longer than conventional alternatives.

TECHNICAL PARAMETERS

Density (kg/m³)	1000-1200
Humidity (%)	8-10
Calorific capacity (MJ/kg)	Min. 17.6
Ash content (%)	0,28
PACKAGING	
Package	4 pcs, weight of 10 kg – sealed in PE foil.
Pallet	Weight of 1,040 kg (104 x 10 kg) – strapped. Only pallets of briquettes are sold.

Storage: Briquettes can withstand normal air humidity, so they can be stored outdoors without concern – under a shelter, tarpaulin or plastic sheet. It is important to protect them from direct contact with water and not to expose the packaging to sunlight. When stored correctly, briquettes remain in perfect condition for many years.
